Policy & Billing FAQ

Storing Devices at Electric

Electric makes device storage easy. We securely store both new and used devices, ensuring they're set up and ready to ship quickly from a single, safe location.

What are the benefits of storing devices at Electric?

Storing devices at Electric offers several benefits including:

Avoid delays caused by long procurement lead times and backordered devices.

Get quicker device replacements for employees whose devices are no longer working.

Have a secure place to return laptops from offboarded employees for wiping and repurposing.

Store excess devices in a secure location, ideal for companies without a physical office space.

What types of devices can I store at Electric?

Electric only stores Windows and Apple laptops (no Linux or Chromebooks), and for Apple devices, we only store those that are less than 7 years old, as Apple considers devices older than that obsolete. Currently, we only store laptops and their chargers – any non-laptop devices shipped to Electric will be returned, and additional shipping fees will be billed.

How much does it cost?

Electric charges \$10 per month for each device stored in our warehouse.

How will I be billed?

If your contract was signed or renewed after November 1, 2021, you will receive an invoice during the first week of the following month. The invoice will reflect the number of devices stored at Electric in the previous month. The billing will be based on the total count of unique devices stored in the warehouse during that period. Please note that billing terms are subject to change.
