Data Security

Our Approach

Customize your security posture based on your business needs. Our team of IT and Security experts can guide you through the different options.

The Advantage

Gain peace of mind knowing your business is shielded by premier cybersecurity solutions. We handle everything from billing to support, and ensure all your devices are covered.

Human Layer

Password Manager: Keeper is the leading cybersecurity platform that protects passwords, secrets, and access to company infrastructure. Protect every user and system in your organization with zero-trust and zero-knowledge security and secure shared account credentials that can be easily shared and securely between the right individuals.

Starting At: \$3.75 per user / month

Security Awareness & Training: Breach Secure Now! is an innovative security awareness platform dedicated to educating individuals on cybersecurity best practices and security awareness training, including phishing simulation prevention training. Equip your employees with comprehensive cybersecurity knowledge to safeguard themselves and your organization effectively.

Starting At: \$50 - 150 per user / month (tiered pricing based on employee count)

Device Layer

Endpoint Protection: ThreatDown is a best-in-class EDR software (Endpoint Detection & Response) that automatically finds and removes malware from your devices, ensuring your devices, company, and customer data remain secure. Through the cloud-based admin portal, you'll be notified of and able to address more complex threats quickly, regardless of where your devices are.

Starting At: \$6 per user / month

Secure Internet Access: Harmony SASE Internet Access provides layered protection against both endpoint-specific attacks like ransomware and web-based threats like phishing and zero-day exploits. Filtering and inspecting internet traffic safeguards users on and off the corporate network, ensuring compliance and blocking malicious content.

Starting At: \$2 per user / month

Network Layer

Network Protection: Perimeter81 remote access VPN gives employees access to a private, secure remote network connection, allowing them to access the internet from anywhere safely. For those with an office, employees can access resources on your network as if directly plugged into your network's servers.

Starting At: \$10 per user / month

Data Layer

Email Security: Harmony Email & Collaboration (HEC) offers complete, defense-in-depth security for Microsoft 365 and Google Workspace. It scans every inbound, outbound, and internal email to prevent phishing and malware from entering or spreading within your organization. HEC leverages the most advanced sandboxing and active content analysis to block what your email's standard security can not.

Starting At: \$6 per user / month

Cloud Backup Platform: Dropsuite helps businesses to securely backup, manage, recover and protect their business information. It works with Microsoft 365, Google Workspace, and other IMAP email servers. It also supports multi-factor authentication (MFA).

Starting At: \$3 per user / month
